CHANTILLY
CREEPING RED FESCUE

SHADE TOLERANT | HEAT&DROUGHT TOLERANT | WEAR/STRESS RESISTANT | PEST RESISTANT | LATERAL SPREAD

# Chantilly Creeping Red Fescue

- **High summer stress tolerance**
- **Wear tolerant**
- **Disease resistant**
- **Endophyte enhanced**
- **Excellent spring density**

Chantilly is a beautiful, strong creeping red fescue resulting from recurrent selections and crosses using plants from persistent older turfs and plants harvested from the Portland, OR area containing "rose city endophyte". The natural presence of endophyte works to repel surface feeding insects and subsequent vulnerability to stresses and disease, especially red thread. Possessing a dark green color with bright highlights, abundant tillers for increased density and the absence of leaf disease, the inherent beauty of Chantilly is evident in the quality of the turf produced.

**USES:** Shaded lawns, ground cover

**IDENTIFICATION:** Narrow-leaved, cool season perennial and creeping and/or bunch growth habit, found mostly in shaded areas. Leaves have folded vernation (stem) and a dull underside.

**ESTABLISHMENT:** Slow establisher like tall fescue. Ideal for shade.

## SEEDING RATES (LBS/1,000 SQ FT)

| | |
|---|---|
| NEW | **4 - 6** |
| OVER | **2 - 3** |

## SEED INFORMATION

| | |
|---|---|
| SEEDS/LB | **365,000** |
| GROWTH HABIT | **CREEPING/RHIZOMES** |
| ESTABLISHMENT (DAYS) | **18 - 21*** |

*Under prime conditions
